The DES PDM 24 CLEAN family is mainly used in the food&pharma production chain thanks to the rounded shape without edges which avoids dirt accumulation and allows frequent washing.

Fixing takes place through hidden threaded inserts that ensure perfect stability of the plate even after countless washes.

The holes location is guided by a laser printing which guarantees the front clean area during the operation.

The first front membrane is lightly drilled with a small screwdriver, while the second parallel membrane acts as a reinforcement, ensuring a very high strain relief and water resistance.
